SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Food Delivery System

1. Introduction

Purpose: The purpose of the Food Delivery System is to allow customers to order food online from nearby restaurants and get it delivered to their doorstep.

Scope: The system provides food browsing, online ordering, payment, order tracking and delivery management.

2. Overall Description

The system has four main users:

1. Customer: Searches restaurants, selects food and places orders.
2. Restaurant Admin: Manages food items, prices and orders.
3. Delivery Partner: Accepts delivery requests and delivers food.
4. System Admin: Manages users, restaurants and overall system activities.

3. Functional Requirements

The system shall provide the following functions:

1. User registration and login.
2. Display restaurants and food menus.
3. Search and select food items.
4. Add or remove items from cart.
5. Place and cancel orders.
6. Make online or cash-on-delivery payments.
7. Track order status.
8. Allow restaurants to manage orders.
9. Allow delivery partners to update delivery status.
10. Generate order and payment details.

4. Non-Functional Requirements

1. Performance: The system should respond quickly.
2. Security: User details and payment information must be secure.
3. Reliability: The system should work without frequent failures.
4. Usability: The interface should be simple and user-friendly.
5. Availability: The system should be available whenever required.
6. Scalability: The system should support more users and restaurants.

5. Hardware and Software Requirements

Hardware Requirements:

- Computer or smartphone.
- Internet connection.
- Server for hosting the application.

Software Requirements:

- Operating System: Windows / Android.
- Frontend: HTML, CSS, JavaScript.
- Backend: Python / Java.
- Database: MySQL.
- Browser: Chrome / Firefox.

6. Use Cases

Actor	Use Case
Customer	Register, login, search food, place order, payment
Restaurant Admin	Manage menu and orders
Delivery Partner	Accept and deliver orders
System Admin	Manage users and restaurants

7. System Constraints

1. Internet connection is required.
2. Online payments depend on the payment gateway.
3. Delivery depends on restaurant and delivery partner availability.

8. Assumptions

1. Users have internet access.
2. Customers provide a valid delivery address.
3. Restaurants maintain updated menus.
4. Delivery partners are available to deliver orders.

9. Conclusion

The Food Delivery System provides a convenient way to order food online. It reduces manual work, saves time and makes food ordering and delivery easier for customers, restaurants and delivery partners.
